- ✔ Native Voice over LTE & Video
- ✔ Interoperable with cellular Carriers
- ✔ End-to-End- data ownership
- ✔ Service grouping, P2T, PBX integration
- ✔ Enterprise processes and

### Ballast Networks

Ballast Networks is a Managed Service Provider delivering converged private LTE/5G and Wi-Fi networks as an integrated enterprise solution. Guiding you from concept, design, deployment, optimization through continuous operation; Ballast provides the network service complete with API's to format the user device data for your enterprise business systems. For the first time the enterprise can now extend network controls, policies, and data ownership to the mobile and fixed wireless network. This control brings the enterprise innovative ways to create new monetization and cost reduction opportunities which reduce the total cost of ownership and provide incremental revenue.
